

About us

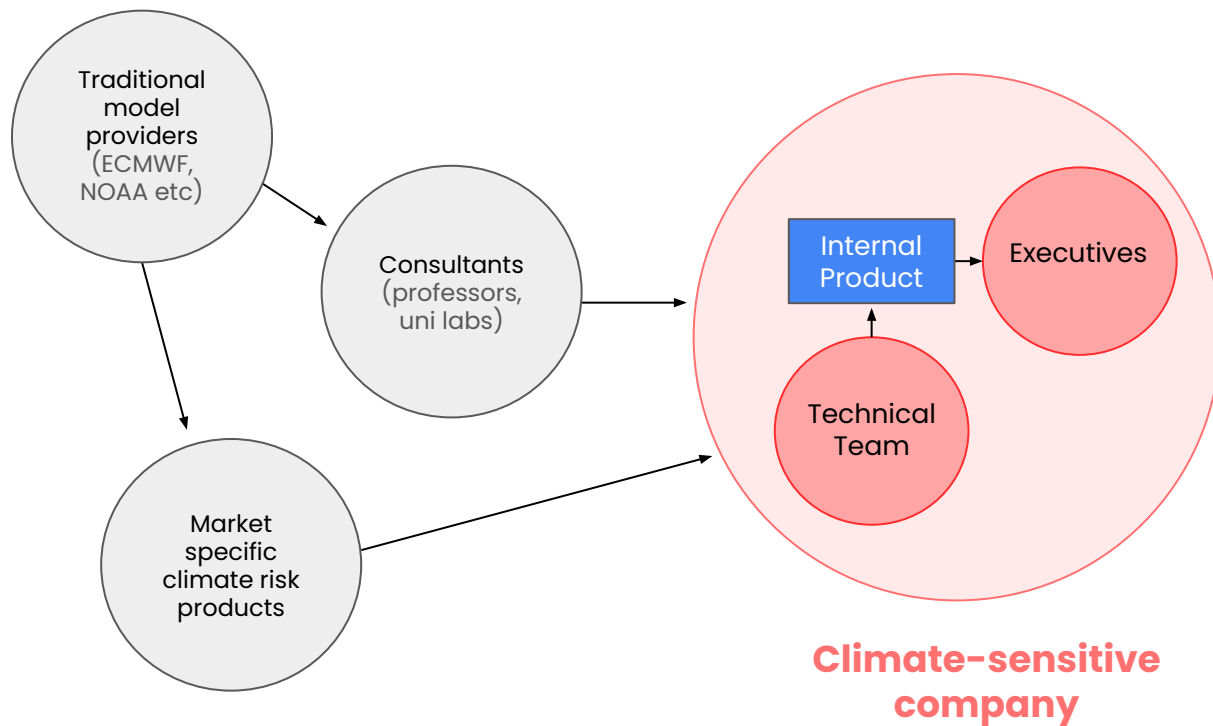

MeteoIA is a startup focused on the development of AI models to predict the climate system and its impacts on climate sensitive institutions.

The company is structured around **MIA**, our centralised modelling system that enables developers and researchers to continuously build and deploy solutions.

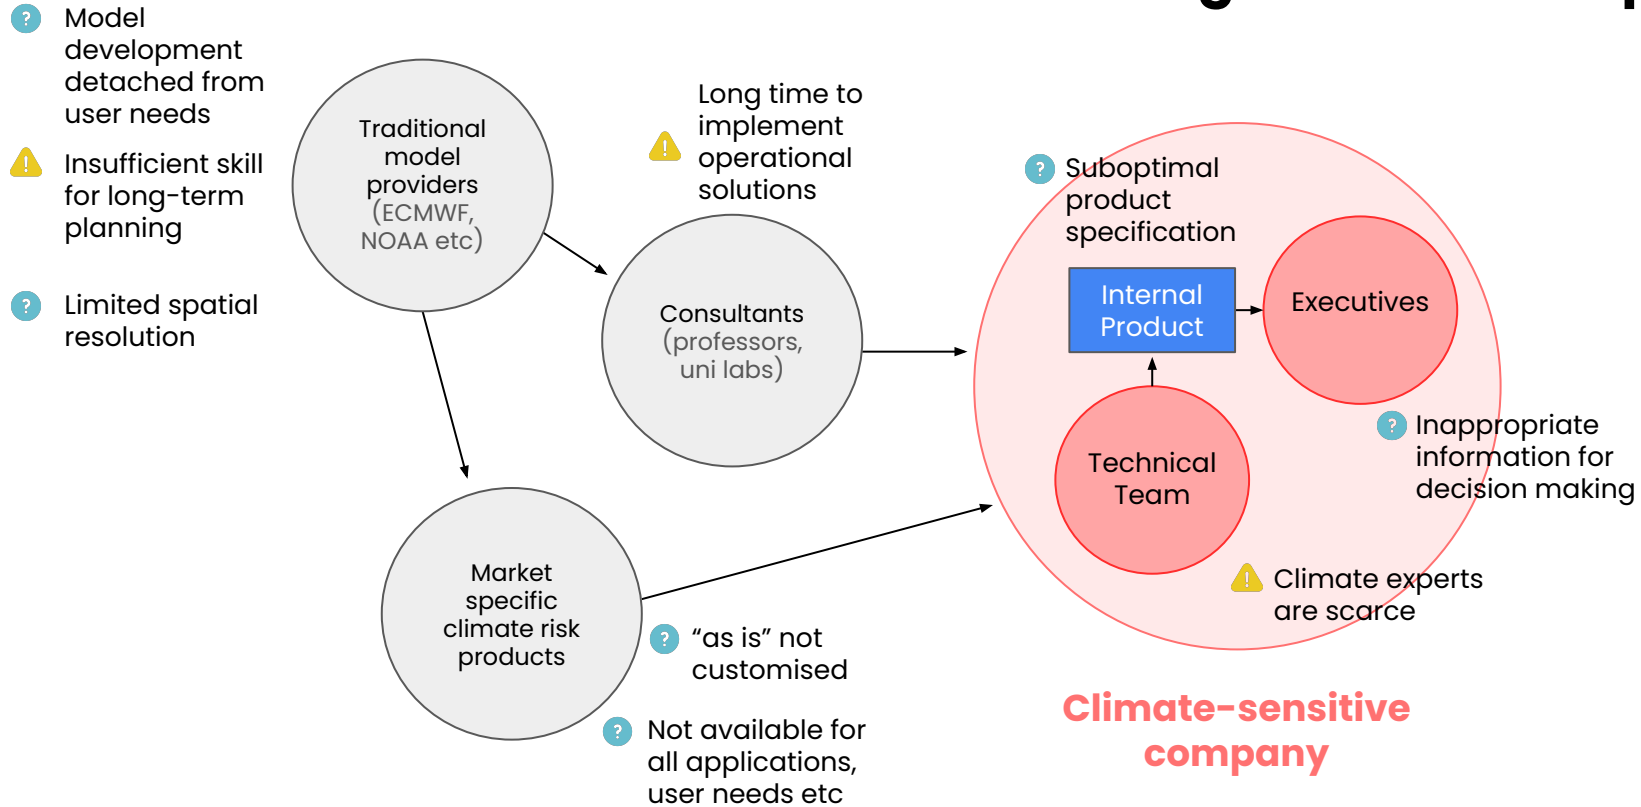

MeteoIA
Climate impact modelling

Climate intelligence landscape

Limitations in the climate intelligence landscape

Increases operational risk

Decreases value for decision-making

✓ Model development driven by end-user needs

✓ High resolution forecast

✓ Flexible predictive horizon

Traditional model providers
(ECMWF, NOAA etc)

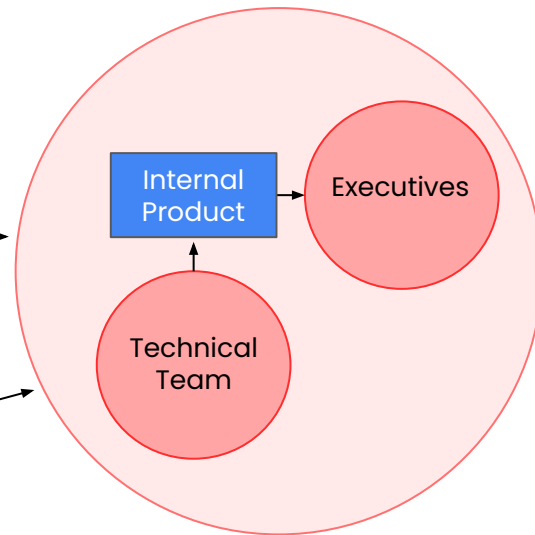

✓ Robust operational data pipeline

Consultants
(professors, uni labs)

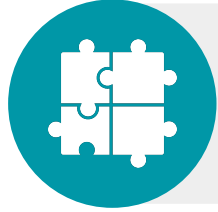

MeteoIA

Market specific climate risk products

✓ Agile implementation of new products

Climate-sensitive company

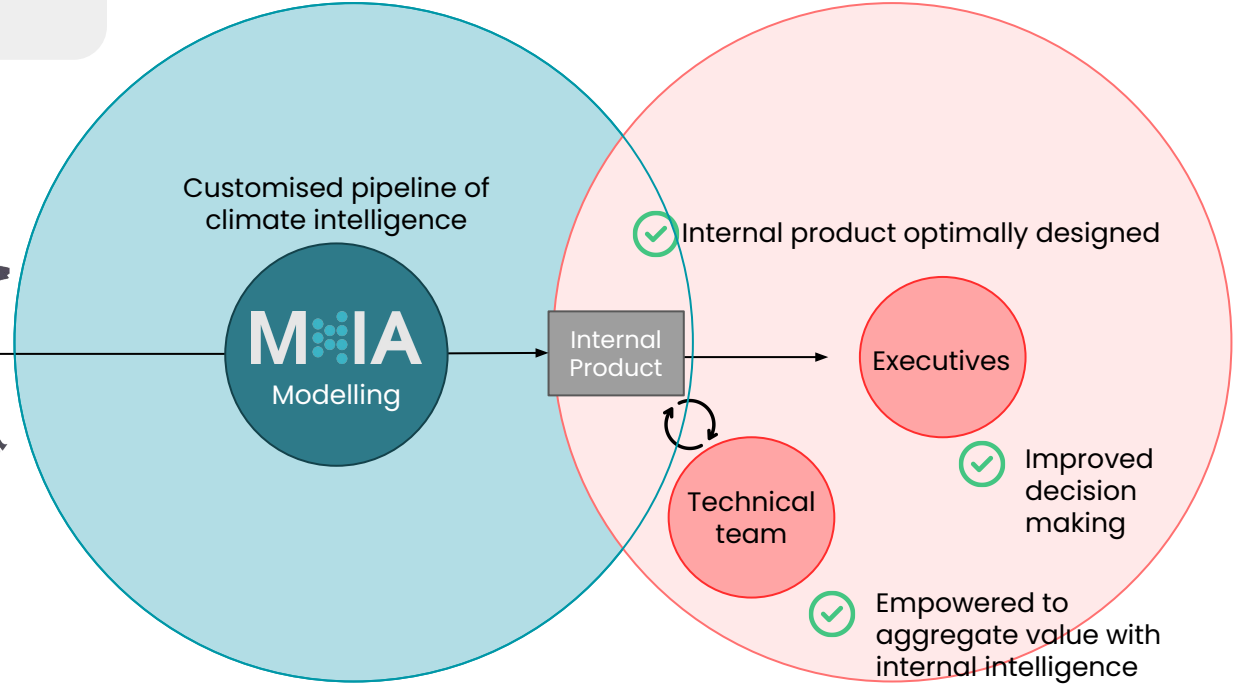

- Higher internal product value
- Secure product operation
- Agile product implementation

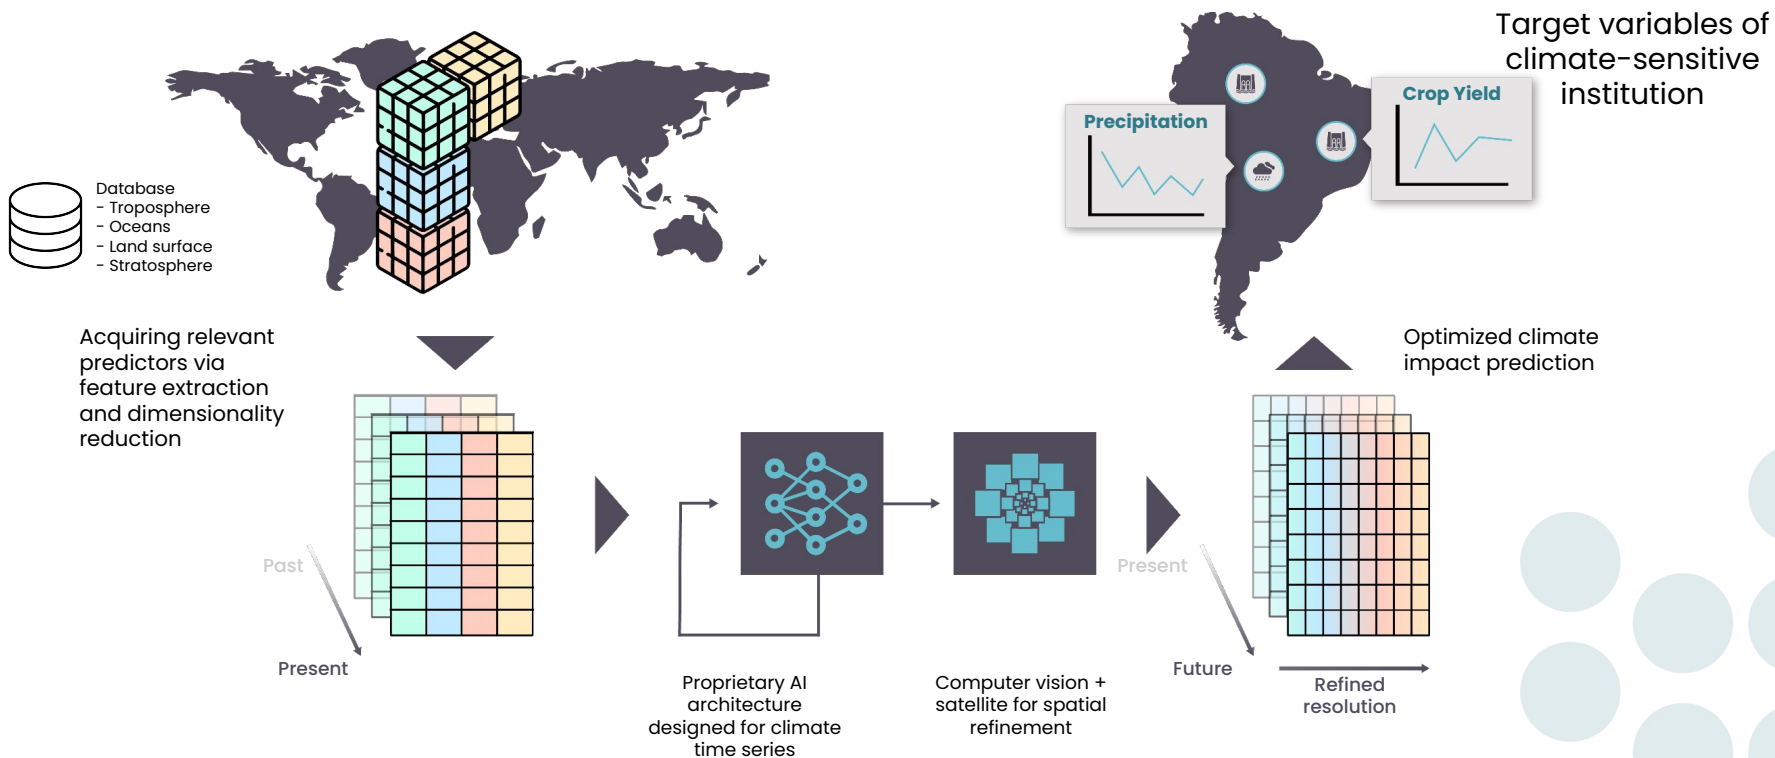

MeteoIA

Climate-sensitive company

✓ Global geospatial data stream

MIA modelling pipeline optimised to meet user needs

- Highly flexible
- Democratises climate impact modelling
